READING COMPREHENSION TEXTS

09:00 Uhr – 12:00 Uhr

Diese Prüfung besteht aus zwei Teilen:

READING: Tasks I - III (9:00 bis 10:30 Uhr)

Pause von 30 Minuten

WRITING: Material-Based Writing (11:00 bis 12:00 Uhr)

Im **READING**-Teil werden Texte und Aufgaben in zwei getrennten Geheften vorgelegt.

Die Aufgaben (**TASKS**) liegen in zwei Varianten (**V1** und **V2**) vor.

Diese sind gemischt auszugeben.

Alle Lösungen sind von den Prüflingen im Aufgabengeheft einzutragen.

In der Pause werden die Text- und Aufgabengehefte von den Arbeitsplätzen der Schüler entfernt.

Der **WRITING**-Teil wird erst nach der Pause, also um 11 Uhr, ausgegeben.

Hilfsmittel: Ein einsprachiges Wörterbuch (ggf. auch inkl. Writing Tutor)

Reading Text I: Recipe for healthy students: Add garden and cooking class to school

(A) The seven young chefs, all between 10 and 12 years old, mesmerized the audience. They sliced and diced onions, peppers, tomatoes and garlic. They sauteed spinach, boiled noodles and toasted tortillas. They worked with hot skillet and sharp knives, preparing tasty meals using their own recipes. They were finalists in the Future Chefs Challenge, a healthy cooking contest held last week at Kimball Elementary School in Southeast Washington — a nutrition education powerhouse that produced all of this year’s finalists from a field of 50 contestants citywide.

(B) “As you may have noticed, our school is located in a food desert,” Eric Dabney, the school principal, said in his welcoming remarks, “so educating our kids around healthy foods and nutrition and how to cook is something we do from pre-K¹ all the way through fifth grade.” A “food desert” usually means an area with high poverty rate, low access to cars and no full-service supermarket within a half-mile radius. Outlets that offer less healthy fare — such as fast-food joints, liquor stores and corner stores — tend to proliferate in those deserts.

(C) Through funding from the D.C. Council and other grants, Kimball is one of 19 elementary schools in the District that can afford to partner with FreshFarm, one of the largest networks of farmers markets in the country that provides Kimball with food educators who teach gardening and cooking. The classes are so popular that absenteeism drops to virtually nil on the days they are held. The school now uses gardening and cooking to enhance math, science and reading, and even incorporates weather, botany and environmental science. All of that in addition to focusing on nutrition.

(D) “The ultimate goal is improving the health trajectory of our kids,” said Margie Sollee, a nutritionist who runs the program at Kimball. Diets high in salt, sugar and fat are known contributors to an epidemic of childhood obesity and diabetes. At Kimball, eating becomes a fun-filled adventure. Cafeteria employees serve as mentors. Dabney has a master’s degree in education, but his undergraduate degree is in culinary arts. And he doesn’t mind showing off his cooking skills to the students. One of the most endearing highlights of the school year is the cooking competition. Magic Johnson² has said he wants to use healthy foods to uplift and empower underserved communities. The ones in Southeast Washington will take all the help they can get.

(E) Only fourth- and fifth-graders are eligible to participate. However, younger students always show up, eager to get a preview of the excitement that awaits them. Angela Payton, a humorist and comfort food chef, served as emcee for the competition. “This place is starting to smell real good,” she shouted. And the food looked good, too. The competition was nerve-racking. For a

moment, Ismail Isley, a fifth-grader, couldn't seem to remember what ingredient came next in his healthy tacos creation. A voice rang out from the audience. "You can do this, Ismail," shouted Garrett Isley, his father. "Just do your best." Almost on cue, Ismail grabbed the ground turkey and sauteed onions and started filling up the taco shells. In the end, the dish that blew the judges away was fried rice, which fourth-grader Angel-Marie Lee had made healthier by using cauliflower rice. Then she jazzed it up a bit with jalapeño peppers. One of the judges said the dish was so good that she was thinking about becoming a vegetarian. "I'm so excited," Angel-Marie said. Second place went to Ismail, who leaped to his feet in excitement. As did his dad, who had been there with encouragement just when it was needed most. "Every school ought to have something like this," Garrett Isley said. There were no losers in the competition, but first place did come with a full set of gourmet pots and pans, a FitBit, a \$100 gift certificate and a starring role in a virtual cooking class video. Moreover, Angel-Marie's fried rice recipe will be on the D.C. public school lunch menu next year.

(F) The competition was the kind of extracurricular activity that brings communities and schools together, and fosters a love for a school that students never forget. The contestants had started out as kids with a budding interest in cooking. However, they departed their cooking stations as culinary rock stars, celebrated by family, friends and schoolmates alike. Joniqua Lee, Angel-Marie's mother, said she appreciated the work the school was doing **to mitigate the consequences of food deserts** and provide students with more food choices. But with a cooking contest winner in the house, there was another benefit worth noting. "She can cook every day now," the mom said.

Reading Text II:

Can souvenir-collecting ever be sustainable?

A) Bringing home souvenirs from distant lands is a ritual as old as travel itself. The early pilgrims returned from Jerusalem clutching fistfuls of soil, while Thomas Jefferson, third president of the United States, took a splinter of Shakespeare's chair in his bag when he visited the bard's home in 1786. The urge to collect titbits from other cultures is as inherent as it is difficult to rationalise.

5 After all, an Eiffel Tower keyring, made in China and sold by a Senegalese immigrant, comes about as close to capturing the essence of the City of Light as *Emily in Paris*³.

(B) In his book *Souvenir* (Bloomsbury), Rolf Potts suggests collecting such trinkets is an attempt to make a moment, a feeling, an experience concrete and durable. But, while some souvenirs cause harm to the planet and its people, others can improve lives and help
10 protect ecosystems. Every traveller looking to be more sustainable in the social media age is familiar with that most clichéd of phrases, "take nothing but memories, leave nothing but footprints". And while it's true that we all need to reduce our consumption and find ever more creative ways to reuse waste (plastic production is expected to almost quadruple by 2050), memories don't provide any economic benefit to the community you're visiting.

15 (C) For travel to be truly sustainable – i.e. capable of being repeated with minimal ill and potentially positive impacts – the people living in a destination need to be the primary beneficiaries of each trip taken there. Sadly, we're a long way off realising this. According to the *World Travel and Tourism Council*, the travel industry employed one out of every 10 people in the world before the pandemic. However, "economic leakage" in tourist destinations – i.e. when
20 international corporations absorb tourist expenditure – is a real problem. In destinations where inclusive package holidays are the norm (think certain Caribbean islands), **economic leakage can be as high as 80 per cent**. Souvenir shopping is one way to counteract this.

(D) "Sustainable souvenirs are particularly important to remote and rural communities, since selling them to tourists can be a source of hard cash in areas without reliable cash economies,"
25 says Potts. "In Papua New Guinea's Sepik River Basin, local craftsmen have adapted sacred masks and figurines to serve the souvenir market. Catering to tourists allows them to stay in their remote homes, rather than having to migrate to urban centres and find hard-labour jobs. In this way, the souvenir trade makes their communities more economically sustainable while reinforcing traditional artistic skills." In certain destinations, makers can't afford their own
30 trading space and may struggle to reach the tourist market due to language barriers. In these cases, shops run by the tourist board or ethical tour operators that support locals are generally the best option, as more of the profit goes towards the maker than in a standard shop. Alternatively, local guides often have itineraries that include visits to artisans' workshops.

(E) But what about those trinkets that can be purchased by the fistful at train stations and outside
35 landmarks, like that previously mentioned Eiffel Tower keyring? "Unlike locally made handicrafts,

³ an American romantic comedy television series created for Netflix

mass-produced souvenirs tend to be products of the global manufacturing economy – and in recent decades the vast majority are made inexpensively in China,” says Potts. Scholars classify mass-produced souvenirs into two categories: objects like T-shirts and coffee mugs that have been branded to a given location are “markers”, while miniature models of local landmarks such as the Colosseum are known as “symbolic shorthand”. “These kinds of souvenirs are less sustainable from an environmental standpoint as they’ve often travelled further than the tourist buying them,” Potts continues. “In addition, it’s taking market share away from locals, while also possibly threatening the very survival of their craft. Take Aboriginal artisans in central Australia. They often have to compete with cheap copies of indigenous art that has been mass-produced and imported from places like Bali and Vietnam.”

(F) Buying low-quality goods has implications beyond the carbon emissions caused by their manufacture and transport. If a plastic toothbrush takes up to 450 years to decompose in landfill, one can only imagine the same is true of an Eiffel Tower keyring. If you can’t see where an object is produced and it’s very cheap, chances are the people who made it are not working in decent conditions.

(G) their social and environmental cost, the ongoing popularity of mass-produced souvenirs goes some way towards understanding why we collect them at all. According to Potts, souvenirs are more like chapter headings in our own narrative than an attempt to evaluate the world. “The very word ‘souvenir’, in its original French usage, means ‘to get back to myself,’ or ‘to remember’. In this way, travel souvenirs are like a conversation one has with oneself over the course of a lifetime.” Perhaps the best way to consume more consciously is to remember that other people are part of this conversation too.

Reading Text III: Love, Hate and Other Filters

Maya Aziz, a 17-year-old Muslim girl, is torn between worlds. There is the life her parents expect for their good Indian daughter and there is the one she dreams of, which couldn't be more different. In the first chapter she finds herself at a traditional Indian wedding.

Everyone seems happy to be here, except me.

It's not just that I hate weddings, which I do. But also because it's Ayesha. I've known her most of my life. She's five years older than me, and in middle school **GAP 1**. The arsenal of lipsticks in her purse and her ability to deploy them perfectly was the kind of social prowess I dreamed of. I never imagined her succumbing to an arranged marriage, especially not right out of college. Even if it was a modified arrangement that involved three months of clandestine dating. Yasmeen leaves me at the door when she spots her mom summoning her to meet another auntie. And the auntie's son. Sweet relief.

When I step into the bridal prep room, I stop short.

I've seen Ayesha smile a million times, but I've never seen her smile like this, like she invented the concept of joy.

"I-I have a surprise," I announce, stammering. I remove my camcorder from my bag and hold it up like a trophy. "I'm shooting a movie of your wedding ..."

Before Ayesha can respond (or protest), the door swings open. Her mother, Shahnaz Auntie, triumphantly arrives with the bridal party in tow. They are ready to take their positions. And only an hour behind schedule, **GAP 2**.

"See you out there," I murmur.

I blow Ayesha a kiss and walk backward, filming the preproceSSIONal scramble. I take a tracking shot into the wedding hall, aglow with thousands of candles, red-and-orange bouquets bursting from the center of tables. I follow the gold organza that drapes the ceiling and trails the flower-strewn aisle leading to the *mandap*—the traditional wedding canopy under which the vows will take place. My mother sees me. Too late for me to hide, even with my camera in hand. She beckons me over to her table, not with a subtle head tilt or single finger hook, but with a full arm wave, **GAP 3**. She's chatting with another middle-aged, sari-clad woman. And a boy—I'm guessing her teenage son. But my aunt Hina is also at our table. Salvation.

It's hard to believe she is my mother's sister. Hina is ten years younger than Mom, has short hair, a zillion funky pairs of eyeglasses, is this amazing graphic designer and cool in ways I can only aspire to. The weird thing is, you'd think my mom wouldn't get along with Hina, but **GAP 4**.

My mom is still waving madly at me. I steel myself, lower my camera, and walk over.

"As-salaam-alaikum, everyone," I say and bend to kiss Hina on the cheek.

"Maya, this is Salma Auntie." My mom takes me by the elbow to draw me nearer, then raises her voice. "And this is her son, Kareem."

Did I mention that subtlety is not my mother's strong suit?

I glance over at my dad, **GAP 5** with Kareem's dad—no doubt about the economy, lawn-mowing equipment, or the trend of teeth whitening at the dental practice he runs with my mom.

“Maya, Kareem is a sophomore at Princeton,” my mother says, “studying engineering.” I can practically see the cartoon light bulb over her head as she speaks.

“How’s it going?” Kareem asks. He scans the room, disinterested. Not that I can totally blame him; no doubt he gets my mother’s message loud and clear. He sports a goatee that I assume is meant to make his boyish face look older or tougher. It does neither. On the other hand, it succeeds at drawing my attention to his rather gorgeously full lips. He has a nice mouth in spite of whatever might come out of it.

My defenses are up. “It’s going fine.” **GAP 6**. “Did you fly in for the wedding?”

“My mom asked me to come. I took a long weekend.” Kareem’s wandering eyes finally meet my own. His are brown, like mine, like most Indians’, but so dark that the pupil almost completely fades into the iris. They’re liquid and beckoning. And his lips. There is no denying that Violet would label them delish.

“Kareem, Maya will attend University of Chicago next year.”

This from his mother, whom I’ve never met. But I understand her attempt to draw out the conversation.

“I got in, but I haven’t decided yet,” I correct.

Inside, I’m squirming. Nobody here but Hina knows my secret. I’ve applied to NYU and been accepted. NYU is my dream school. I’m not going to the University of Chicago if I can help it. The mere fact that I’ve pulled off this feat—under the radar, in spite of the ever-present gaze of my parents—represents **a tiny victory**, one that fills me with both hope and guilt. My stomach churns every time I get close to telling them. Especially my mother.

But I have to tell them. And soon. This secret has an expiration date. How, though? How can I tell my mother that I don’t want to go to a great school—one that’s an easy commute from home, but also from endless family obligations and her constant hovering?

“Decide? What’s to decide?” my mom demands, as if reading my thoughts. “You’ve gotten into one of the best schools in the country. It’s decided.”
